Education

York University Toronto, ON, Canada
Bachelor of Science, Computer Science (Specialized Honours) *September 2024 - August 2028*

Experience

Intake Specialist November 2023 - January 2025
MSH International – Health / Travel Insurance *Toronto, ON, Canada*

- Handled 100+ member calls weekly regarding health and travel insurance coverage and coordinated care with international providers.
- Consistently ranked top 3 in call volume while providing bilingual support in English and French.

Customer Service Representative June 2021 – April 2023
Electrolux – THD Department *Mississauga, ON, Canada*

- Provided technical troubleshooting and support for kitchen appliances through phone, email, and chat, identifying issues and guiding customers through appropriate solutions.
- Collaborated with technicians and internal teams to escalate complex issues, communicate technical information clearly, and resolve customer concerns.

Projects

Pantry Tracker August 2026 - Present

- Built and deployed a full-stack pantry application with Next.js and Firebase, connecting a React frontend to Firestore storage for managing pantry inventory.
- Implemented Firestore CRUD operations to persist item additions, updates, and deletions, allowing inventory changes to remain available across sessions.
- Used Firestore real-time listeners to synchronize inventory changes with the UI and added client-side filtering to quickly search stored items.

AI Car Buying Assistant November 2025

- Built and deployed a conversational car-buying assistant with Next.js and TypeScript, using OpenAI's API to translate natural-language conversations into structured buyer preferences.
- Implemented deterministic preference parsing and vehicle scoring in TypeScript to rank vehicles by budget, condition, reliability, comfort, and performance without relying on the LLM for recommendations.
- Separated conversational AI from application logic through dedicated API routes, using the LLM only for conversation and fallback responses to reduce token usage and keep recommendations predictable.

Hackathons

YEC Hackathon | *Anti-Inflation* October 2025

- Led the frontend architecture and UI development for a four-person hackathon project that analyzes grocery prices and inflation trends.
- Built an interactive Next.js dashboard with CSV upload, data transformation, category filtering, price comparisons, and visualizations for analyzing grocery datasets.
- Integrated frontend workflows with the backend API, implementing input validation, loading states, and error handling to process uploaded datasets reliably.

UmmahHacks | *DeenCal* January 2026

- Built a conversational calendar application with Next.js and TypeScript, converting natural-language scheduling requests into structured events through API routes.
- Implemented rule-based intent, date, and time parsing to extract event names, relative dates, time ranges, and scheduling relationships from user messages.
- Integrated the Aladhan prayer-time API with custom conflict-detection logic to identify protected prayer periods and generate alternative scheduling suggestions.

Skills

Languages: JavaScript, TypeScript, Python, Java
Technologies: Git, React, Firebase
